Kalimba tab drafts: what to review

91 bars likely wrong and 142 bars to check, in 50 drafts (songs in readiness order). From the checks: round trip (tab = its ABC), independent sources (roll, MIDI, swaralipi), syllables, rhythm and octaves against the swaralipi; sorted by triage.py. **Likely error**: two sources agree against the tab, the roll sides with the swaralipi on a syllable's length, or a syllable is off the swaralipi's notes. **Check**: one source only, or the syllables were placed by hand. Variants (another source plays the tab's note) and decisions recorded in review_decisions.csv are left out. **tab** = line:column in the ktab file.
